

Shan Bullard

Sherman, TX | (903) 308-1127 | shan.bullard@zohomail.com | [LinkedIn](#)

Professional Summary

Full-stack Senior Software Engineer with 13+ years delivering production systems across **React**, **Next.js**, **Ruby on Rails**, **Java Spring Boot**, **Node.js**, and **Python**. Experienced building **microservice** architectures, **event-driven** backends, and consumer-facing web platforms at product companies. Comfortable owning work end-to-end from API design and data modeling through to frontend delivery and CI/CD.

Technical Skills

- **LANGUAGES:** JavaScript, TypeScript, Ruby, Java, Python
- **FRONTEND:** React, Next.js, SolidJS, React Native, Redux, Zustand, Apollo GraphQL, HTML5, CSS3, Tailwind CSS, Material UI, Bootstrap, Webpack / Vite
- **BACKEND:** Ruby on Rails, Node.js (Express, NestJS), Java Spring Boot, Python (FastAPI, Django), GraphQL, RESTful APIs
- **ARCHITECTURE & PATTERNS:** Microservices, Modular Monolith, Event-Driven Architecture, TDD, DDD, CQRS, API Gateway, Legacy Modernization
- **CLOUD & DEVOPS:** AWS, Azure, GCP, Docker, Kubernetes, Heroku, Vercel, Terraform, GitHub Actions, CI/CD
- **DATABASES:** PostgreSQL, MySQL, CosmosDB, MongoDB, Amazon DynamoDB, Redis,
- **EVENT-DRIVEN:** Sidekiq, Kafka, RabbitMQ, AWS SQS/SNS, Azure Service Bus, Redis Pub/Sub
- **AI/ML:** LangChain, LlamaIndex, Vector Databases, RAG, OpenAI API, prompt engineering
- **ANALYTICS & MONITORING:** Datadog, Grafana, Prometheus, Sentry, GA4, Hotjar, Segment
- **TESTING:** Jest, Vitest, Cypress, Playwright, JUnit, Mockito, pytest, TDD practices
- **COMPLIANCE:** WCAG 2.1, GDPR, SOC 2, PCI DSS
- **AI Dev Tools:** Claude Code, Cursor, Codex

Professional Experience

Senior Software Engineer

Wrike | Dallas, TX

Jan 2022 – Jan 2026

Wrike is a cloud-based collaborative work management platform used by 20,000+ organizations globally, with 250+ engineers across product and technical teams.

- Contributed to Wrike's TypeScript + React micro-frontend architecture, building independent application modules that deployed to production in minutes with 10-second rollback capability.
- Worked on core product surfaces including Kanban boards, Gantt charts, task hierarchies, and real-time collaboration features serving 1.6M+ annual users across enterprise accounts.
- Developed backend services in Java 17 with Spring, integrated with PostgreSQL and MyBatis, contributing to Wrike's distributed monolith and ongoing migration toward microservice architecture.

- Built and maintained event-driven workflows using Kafka and RabbitMQ for asynchronous processing of user activity, notifications, and data sync across services.
- Collaborated with DS/ML teams on integrating AI-powered product features including smart recommendations, personalized search, and automated workflow suggestions implementing the orchestration layer connecting ML models to product APIs.
- Participated in Scrum ceremonies across cross-functional teams (product, QA, UX, analytics), contributing to architectural decisions before planning and owning features end-to-end.
- Improved test coverage and CI/CD reliability using Wrike's internal Java/Kotlin/Scala QA framework, contributing to a suite of tens of thousands of automated tests running on scalable cloud infrastructure.
- Worked with Wrike's AI Work Intelligence features including Wrike Copilot and next-gen analytics, applying automation to reduce manual workflows and surface actionable insights for enterprise customers.

Senior Software Engineer

Home Tech Innovation, Inc. | Remote

Sep 2017 – Dec 2021

Suvie is a consumer IoT company building a connected kitchen robot with patented Cool-to-Cook® technology, a subscription meal-kit platform, and companion mobile apps.

- Architected and maintained the core Ruby on Rails + Solidus backend handling the full subscription lifecycle including plan creation, Stripe billing, upgrades, pauses, and cancellations backed by PostgreSQL; collaborated with product to evolve the data model as Suvie scaled hardware sales and meal-kit simultaneously.
- Built a cron-driven Sidekiq pipeline automating weekly meal box fulfillment including order generation, inventory allocation, and fulfillment handoffs without manual intervention; reliability was business-critical, with a missed job directly impacting subscriber satisfaction.
- Designed an event-driven notification system where Sidekiq workers fired on subscription lifecycle events (confirmations, delivery reminders, failed payment retries, cook-ready alerts), modeled so new notification types could be added without touching existing job logic.
- Designed the dual GraphQL API layer serving web and mobile clients leveraging Hasura for real-time queries over PostgreSQL and a custom Rails GraphQL endpoint for business logic maintaining consistent contracts across surfaces and eliminating duplicated resolver logic.
- Implemented Stripe webhook handling with full idempotency, processing subscription renewals, failed charge retries, and plan change callbacks reliably at scale.
- Led frontend development of the Suvie Meal Planner in Next.js, the primary subscriber surface for account management, recipe browsing (thousands of items with allergen/dietary filtering), and subscription handling. Apollo GraphQL, Redux, and NextAuth; also worked directly with product and design from wireframes to production.
- Built and optimized suvie.com marketing site on Next.js + Strapi headless CMS; focused on SSR, image optimization, and bundle tuning to maintain strong Core Web Vitals at the top of the acquisition funnel, directly improving conversion.
- Instrumented GA4 and GTM across the full funnel; added Hotjar heatmaps and session recordings on the Meal Planner. Ran A/B tests on plan selection, recipe filtering, and checkout, each with defined success metrics before launch.
- Rewrote the Cypress and Enzyme test suite that had grown slow and flaky due to overtested flows and timing dependencies; restructured the suite and GitHub Actions pipeline, reducing CI time by ~40% and eliminating recurring false failures.

- Contributed to the React Native mobile app, primarily the IoT integration layer using AWS IoT SDK over MQTT for real-time appliance communication, remote scheduling, and push notifications.
- Enforced WCAG 2.1 accessibility standards across all web properties, including semantic HTML, keyboard navigation, ARIA, screen reader support, and contrast compliance serving users who rely on the product due to physical difficulty with traditional cooking.

Software Engineer

Readz | Remote

Oct 2012 – Jun 2017

Readz is a cloud-based digital publishing platform enabling brands and marketing teams to design, publish, and distribute interactive content including digital magazines, reports, newsletters, and microsites without code.

- Built and maintained core features of the Readz Design Studio, a freeform canvas-based drag-and-drop editor for creating rich interactive digital publications, powered by JavaScript and served via a CDN-backed publishing pipeline.
- Developed responsive publication rendering for cross-device delivery (desktop, tablet, mobile) using HTML5, CSS3, and vanilla JS, ensuring pixel-accurate layout fidelity for clients including Nike, IBM, Deloitte, and BASF.
- Integrated third-party marketing and analytics tools including Google Analytics, GTM, Marketo into the platform's publishing pipeline, enabling enterprise clients to track audience engagement across published content.
- Built interactive content elements including animations, parallax scrolling, embedded media, and form integrations for the Readz Studio, contributing to the platform's differentiation as a no-code interactive publishing tool.
- Contributed to platform scalability on AWS infrastructure, supporting growth from a startup to an enterprise-grade product used by Fortune 500 companies.
- Participated in full product lifecycle from feature design through QA and deployment, working in a small remote engineering team with a fast release cadence.

Education

Master of Science, Computer Science

University of Texas at Dallas

2012 - 2014

Bachelor of Science, Computer Science

University of Texas at Dallas

2008 - 2012
